# Narcissus or Daffodils

In a general way, daffodil and narcissus mean the same thing; daffodil is the common name and narcissus the botanical name. Common usage among garden makers in this country has applied the term daffodil to the giant trumpet varieties, while the smaller or medium trumpet, as well as the cluster-flowered and poet's types, are referred to as narcissus. Botanically, these smaller or medium trumpet daffodils are the barri, incomparabilis, leedsii, poeticus, poetaz, polyanthus and miniature types. To avoid confusion, we are listing all of these classes as daffodils. Some gardeners apply the name jonquil to the giant trumpet daffodils, but this is misleading, as the true jonquils and campernelles are small-flowered and sweet-scented; showy when massed in beds, borders or naturalized. Their delicious fragrance makes them indispensable for cutting.

As daffodils bloom early, last a long time, and may be had in so many lovely varied forms, they have few equals as garden flowers. They are most desirable for any garden purpose—in masses, in beds or borders, in groups of twelve or more here and there in the hardy perennial border, or in the foreground of shrubbery. For naturalizing in large quantities, no other flower is more suitable. Ideal, easily grown subjects for winter blooming in the house, especially the paper white grandiflora and soleil d'or narcissus which will be found listed on page 9.

Brief cultural directions for the growing of daffodils indoors and outdoors are given on page 4; full directions are printed on every bag containing the bulbs. Daffodils are easy to grow and require little care.

# Medium Trumpet Daffodils

On this and the next two pages we offer a choice assortment of daffodils whose trumpets are not so long as the perianth segments. In this group, where the trumpet is greatly reduced in size and cupped, we refer to it as a "cup"; where trumpet is shortened but expanded or broadened, we call it a "crown" and where very small and flattened, an "eye." There are some particularly showy and beautiful daffodils in this group.

The Medium Trumpet class is divided into three groups—Incomparabilis, Barri and Leedsi. These divisions are based mainly on the relation of the perianth to the trumpet, crown or cup; an explanation is given under each group as to its distinguishing characteristics.

## INCOMPARABILIS DAFFODILS

Trumpets, crowns or cups measure from one-third to less than the length of the perianth segments. The largest red-crowned varieties are found in this group; they are brightest when grown in semi-shade. Showy in all garden plantings and ideal for cut flowers.

## How to Grow Daffodils

**Outdoors:** For best results plant bulbs as early in the fall as possible, 4 to 8 in. deep and 6 to 10 in. apart; the exact distances depend on the size of the bulb and the nature of the soil. In very cold locations, after the ground is frozen hard, cover with leaves, straw or coarse litter to a depth of 4 to 6 in. to prevent alternate freezings and thawings.

**Indoors:** Put several bulbs, about 1 in. apart (same variety) in a pot, barely cover the bulbs with soil, water thoroughly and put in coldframe or heel-in in the garden for 8 to 10 weeks to force root development before bringing indoors for winter blooming. Full cultural directions on bags containing bulbs.

**7048 Carlton** Giant, clear yellow flowers with broad, flat, nicely overlapping perianth petals; the half-long trumpet is large, expanded and prettily frilled at the brim. Vigorous and sturdy.

## Polyanthus Narcissus

Popular for growing in the house during the winter and early spring, either in soil or in pebbles and water

One of the easiest flowers to grow. Best results are obtained if your first plantings are not made until after October 15. To have a continuous display, make successive plantings two or three weeks apart. We suggest you order enough bulbs early, as they will keep in perfect condition if put in a cool, dry place until needed for planting.

**Water Culture:** Put an inch or two of sand or pebbles in bottom of dish; set the bulbs upright and place sufficient pebbles around them to hold them in place. Fill dish with water and set in a dark, cool room until plenty of roots have formed, after which bring to a light but cool, free from frost, place. Polyanthus Narcissus may also be grown in soil. **They are not suited to garden planting** except in frostless localities.

### 7187 Paper White Grandiflora

The large, pure white, sweet-scented blooms are borne in clusters and are highly prized for their beauty, fragrance, and the ease with which they can be grown. This accounts for the universal popularity of Polyanthus Narcissus for indoor decoration during the winter.

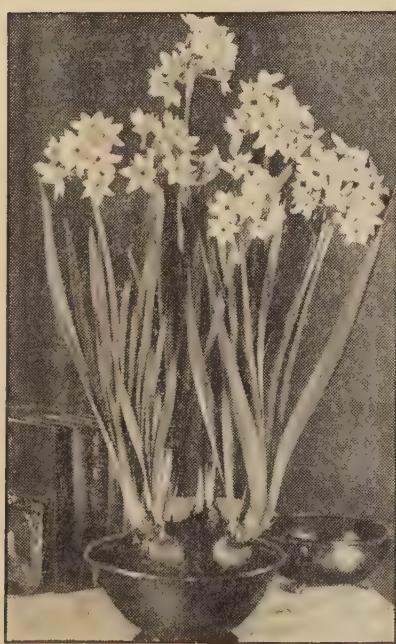

**LARGE BULBS:** 3 for 30¢; 12 for \$1.00; 100 for \$7.50

### 7188 Soleil d'Or—Golden Yellow Narcissus

Often called the "Yellow Paper White," the sweet-scented blooms being rich golden yellow with a deep orange-red cup. May be grown, like Paper Whites, in water and pebbles, but do best when grown in soil. Full cultural directions are on the bag containing the bulbs.

# Giant Hyacinths

The Finest for Beds, Borders  
and for Growing Indoors

Among the many flowers that can be grown from fall planted bulbs, the hyacinth stands at the top of the list. It is probably the easiest flower to grow in pots or bowls, and what could be more decorative or attractive than a display of hyacinths in the house during the winter or early spring! Equally effective and beautiful are beds, borders or irregular groups here and there among perennials, in combination with pansies, forget-me-nots, English daisies, arabis, aubrieta and hardy alyssum, or in the front of shrubbery. We offer the best varieties.

## French Roman Hyacinths

Attractive early flowering hyacinths which are highly prized for house culture. Very easily and quickly grown; they may be had in bloom for Christmas if potted up in early September. For a continuous display during the winter, plant some bulbs every two weeks. Each bulb, although smaller than other hyacinths, will produce 3 to 5 long, slender, loosely formed, graceful spikes, the flowers of which are delightfully fragrant. For best effect, plant about 4 bulbs in a 5-inch bulb-pan; lovely in dainty bowls and fancy pottery. French Roman Hyacinths are not adapted for outdoor planting except in frost-free localities.

- 7237 **Blue Roman** Beautiful blue, small bells of exquisite clearness.
- 7238 **Pink Roman** A shade that is so much admired. Loose spike.
- 7239 **White Roman** Exceedingly attractive; free flowering and graceful.

# Burpee's Hardy Garden Lilies

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but it is advisable to mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfer ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety, some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend hardy lily bulbs for house culture; for this purpose, plant the Easter Lilies offered on page 30 which also may be grown outdoors in sections where winters are mild.

Candidum or Madonna Lily

## CANDIDUM—(Madonna or St. Joseph's Lily)

Waxy white, sweet-scented, broadly funnel-shaped flowers with yellow anthers are freely produced during June and early July atop strong stems 2 to 4 ft. tall. Individual flowers measure 3 to 4 in. long and fully as wide. In addition to being known as Madonna or St. Joseph's Lily, it is also known as Annunciation, Lent or Bourbon Lily. Very popular; easily grown. Likes full sun but will endure light shade. Candidum lilies usually produce top growth before cold weather sets in. This growth need not be protected during the winter except in very cold localities. Do not use any heavy material that will pack down and smother the plant. Loose straw placed around the plant is the most desirable.

**7243 EXTRA LARGE BULBS** These bulbs will produce taller plants, larger blooms, and more of them to a stem than the large bulbs.

45¢ each; 3 for \$1.20; 12 for \$4.50; 25 for \$8.50

**7244 LARGE BULBS** Several large, delightfully fragrant flowers per stem are produced the first year after planting, more the next.

35¢ each; 3 for 95¢; 12 for \$3.50; 25 for \$6.50

**7245 Canadense** (*Canadian Lily*) Lovely, nodding, bell-shaped flowers, usually yellow but often shade to deeper orange. They are heavily dotted purplish black on the inside and are borne in clusters during late June and July. Does well in partial shade. Graceful and pretty native lily that seems to do best in a damp or moist location but soil must be well drained. It will, however, do well in any good garden soil but will do better if soil is mixed with leaf mold such as is found in the woods. Ideal for naturalizing. Grows 3 ft. and more tall.

40¢ each; 3 for \$1.00; 12 for \$3.60; 25 for \$6.50

**7246 Centifolium hybrids** Immense, white, funnel-shaped, fragrant flowers, the outside varying from emerald-green through tints of pink to brownish purple. These gorgeously colored hybrids bloom in July and August and when well established grow up to 6 ft. in height. Prefer partial shade.

40¢ each; 3 for \$1.00; 12 for \$3.60; 25 for \$6.50

**7247 Henryi** (*Yellow Show Lily*) Brilliant salmon-orange flowers with reddish brown spots and a green central line in each petal. Blooms in late July and August. Sometimes called the Yellow Speciosum Lily as petals reflex. 4 to 6 ft. and more when established.

50¢ each; 3 for \$1.35; 12 for \$5.00; 25 for \$8.75

**7248 Orange Triumph** Erect, large, broad-petaled, cup-shaped light pinkish orange flowers faintly spotted maroon and produced in clusters of 7 or 8 atop strong 4 ft. plants in July and August. Being of the umbellatum type, it is of the easiest culture in any ordinary garden soil, light or heavy.

## Delivery of Hardy Garden Lily Bulbs

Hardy Garden Lilies are sent you in the fall just as soon as they are thoroughly cured and in the proper condition for planting. Some varieties will not be ready until November or early December. Plant them in the garden as soon as possible after they are received. If you live in a locality where the soil freezes early, we suggest that you cover the ground with manure, leaves, straw, etc., to prevent it from freezing. When lily bulbs arrive, remove covering and plant them immediately. Do not put the covering back over the bulbs until after the ground has frozen hard. The purpose of the covering is to keep the ground frozen so that alternate freezings and thawings will not injure root growth during the winter. Remove covering in spring.

## How to Grow Tulips

**Outdoors:** Tulips should not be planted in soil in which they had been grown the last two seasons. Select a new location in a sunny position. Do not use fresh manure at planting time; well-rotted manure or bone meal may be worked into the soil which should be well drained. Plant bulbs 5 to 6 in. deep and 6 to 8 in. apart.

**Indoors:** A mixture of  $\frac{2}{3}$  good clean garden soil and  $\frac{1}{3}$  leaf mold to which a little bone meal has been added will give the best results. A 6-inch pot will hold about 6 bulbs. Place bulbs about 1 in. apart each way. Cover with an inch of soil and water thoroughly; then put pots in a coldframe or heel-in in the garden for 8 to 10 weeks to force root development. Bring pots indoors, first in a cool location and gradually to the average living room temperature.

# Giant Darwin Tulips

The chief characteristics of Giant Darwin Tulips are the attractively shaped flowers, tall stems, and lovely colors—scarlet, crimson, rose, pink, violet, purple, slaty blue, blue-violet, lavender, white, golden yellow, etc. They are wonderful for planting in masses in beds, borders or in groups of twelve or more here and there among the hardy perennials, and what could be lovelier for cutting?

If the widest assortment of colors is desired in late tulips, the Giant Darwin, Ideal Darwin, Lily Flowered, Breeder and Cottage varieties should be included in your plantings, as each class has its own range of colors, and all usually bloom during May. The height given for each variety is average and some variation is natural in different localities and seasons. We offer a choice selection of better varieties.

# Cottage Tulips

Cottage or May Flowering Tulips are, perhaps, the most permanent of all tulips, blooming in early May, hence the name, "May Flowering." The term "Cottage" is of recent origin, and so called because so many were planted around the country homes and cottages of England. As a class, they are rich in the more delicate and artistic shades of yellow, orange, fawn, salmon, old rose—colors missing to a great extent in other late tulips.

Cottage Tulips are as varied in their range of colorings as the Darwins and are mostly long and oval-shaped; those with gracefully reflexed petals are offered separately as Lily Flowered, page 22. Stems are long and not so stiff as the Darwins or Breeders. Excellent for cutting and unsurpassed for garden decoration. Planting directions are on every bag containing the bulbs.

## Chameleon Tulips

In shape and habit of growth, these resemble the Darwins, but the colorings remind you of the Cottage Tulips. Rather than list them with either class, we are keeping them separate so you will not miss them. When first opening, the flowers are white with faint red or pink markings on edges of petals. As flowers age the pink or red suffuses over entire surface so that the colorings change from day to day, hence the appropriate name "Chameleon." Their ever-changing colorings are a constant delight and create a lovely effect in the garden or as cut flowers. Flower in May outdoors; can be forced for blooming indoors in February.

**7558 Fanny Farrar** Opens white with rosy shading. When fully developed the flower becomes a bright rosy red. Strong stem. 28 in. 3 for 50¢; 12 for \$1.75; 100 for \$12.00

## Spring Flowering Crocus

Bloom in early March and will grow in many places—in the lawn, flower borders, rock gardens, edge of shrubs, on the slopes of terraces, in sun or shade, and even under trees. For showy effect, plant racemes 3 to 4 in. apart, 2 in. deep. To avoid formal arrangements when planting in the lawn, scatter the bulbs and plant them where they fall. In borders, double rows 6 in. apart with the bulbs spaced 3 in. apart in each row are very showy; such ribbon arrangements are most striking. Well-drained, fairly rich soil will give the best results.

**Indoors:** Plant 8 to 10 bulbs 1 in. deep, 2 in. apart, in a 6-in. container using light sandy soil to which bone meal has been added; water well and set in a cool cellar for about 6 weeks so that bulbs will become well rooted. When top growth has begun, bring them to the light. Keep in a cool location and gradually bring to a sunny position where it is not too hot. They will not stand forcing or too much heat. Usually bloom in six to seven weeks after they are well rooted. Make several plantings for a longer blooming period.

Particularly suited for woodlands, shaded corners or crevices of the rock garden. Bloom in April. They do best in partial shade, in any well-drained loamy or gritty soil, moist and rich in leaf mold. Fine for pot culture, borders and rock gardens. Ideal for cutting. 1 ft.

**7653 Tecolote Giants** The largest and most magnificent strain ever offered. Giant double and semi-double flowers, 3 in. and more across, are freely borne on strong stems, 12 to 15 in. long. Our mixture contains a wonderful range of colors—yellows, from straw to deep golden yellow; all shades of red; orange; pink; many ringed and tipped with a deeper color. Do best in a shady location and in moderately rich soil. Fine for cutting. Not reliably hardy north of Washington, D. C., except in warm, sheltered locations. Splendid for growing in frames or pots. Set roots, claws downward, 2 in. deep, 4 to 6 in. apart. If grown in pots, plant 6 to 8 roots in a 6-in. pot; cover roots with 1 in. of soil, and allow 2 in. of space between them. Ranunculus roots are small and resemble tiny clumps of dahlias. 3 for 20¢; 12 for 65¢; 100 for \$4.50

In northern states, or in any cold section, we advise waiting until spring to plant Ranunculus and Anemone bulbs outdoors. Both of these classes, however, are suitable for indoor winter culture or growing in frames.
